

LET'S TALK ABOUT VACCINES!

ARE YOU PREGNANT?

» DID YOU KNOW THAT...

- Pregnant individuals experience physiological changes to their immune response during pregnancy, which can make them more prone to infectious illnesses?
- Severe complications from vaccine-preventable diseases include inadequate fetus size for gestational age, premature birth and increased mortality risk for both the pregnant person and the baby?
- Neonates have poor immune responses after birth and rely on antibodies obtained from the mother? This will protect infants until they are old enough to receive vaccines themselves.

» THE FOLLOWING VACCINES PROTECT YOU FROM THESE DISEASES AND OTHER COMPLICATIONS, AND OFFER YOU IMPROVED QUALITY OF LIFE:

INFLUENZA

COVID-19

TETANUS, DIPHTHERIA AND PERTUSSIS (Tdap)

» THINK ABOUT THE FOLLOWING QUESTIONS:

Do I know which vaccines I can get to protect me and my baby from preventable diseases and help me have a better quality of life?

When was the last time I received my vaccines?

Do I need to be vaccinated again if I already got vaccinated last year?

What can I gain from getting vaccinated?

Do I have any concerns about the safety or the efficacy of vaccines?

ASK YOUR PHARMACIST FOR ADVICE ABOUT VACCINES!
